Individual Lawn Care Services

- Liming or Gypsum Conditions your soil and re-balances the pH level of your soil. An excellent amendment process that improves soil over several seasons.
- Core Aeration removes small cores of soil to ease compaction and allow your lawn to better utilize water and nutrients.
- Topdressing adds organic matter to the soil and helps to restore thin or small bare areas caused by insect and other damage back to a thick green lawn.
- Over Seeding helps to thicken your lawn and fill in small bare areas.
- Power Seeding (Slit Seeding) helps more problem lawns with restoration.
- Perimeter Insect Control gets rid of pesky insects like earwigs and ants trying to invade your home from the outside.
- Vegetation Control controls unwanted vegetation growing on your patio, driveway or walkways down to the root!
- Lawn Repair: If you have highly advanced damage on your lawn from winter kill, neglect, lack of watering or Pest damage, Call us today and we'll help formulate a proper plan to get your lawn back into the Healthy Green lawn you desire.
- For our Standard Core service of Fertilizer, NEW Liquid Fiesta Weed Management, White Grub & Chinch Insect Management please visit under our Heading Healthy Lawn Care programs or under Pest Identification

For your convenience, service continues from season to season, from year to year, as plants grow stronger, thicker and healthier with ongoing care. For any change in service, please call our office during regular business hours. 905-707-9994 or 1-888-503-LAWN (5296) We are always ready and happy to help!

* Applied in accordance within IPM guidelines, provincial and local by-laws. Program services may be altered or substituted to comply with provincial regulations and developments in organic & traditional technologies that provide for more effective control. Management is defined as the holistic processes employed to control the incidence and numbers of weeds & turf damaging pests in order to promote a thicker, healthier and greener lawn. Total weed and crabgrass

control is neither reasonable nor practical to expect under new laws. Our Organic & Natural alternatives will provide a Thick, Green & Healthy lawn that you will love, Guaranteed, as long as we work together.

** Some lawns may be at a level of weed infestation (generally more than 10-20%weeds) that requires additional treatments at an added cost in order to bring the weed levels to a more manageable level. We do NOT guarantee a weed free lawn.

Code of Practice and Integrated Pest Management

Safer

The core of our programs emphasize maintaining proper plant health and educating our clients about proper maintenance. By working with our trained Plant Health Care Experts, we can assure a safer plant health service.

Our programs help to keep your lawns and plants in their best shape without the use of any pesticides.

If your lawn develops a problem, LawnSavers will always use the safest and most effective treatment option available on the market. To ensure this, we are always conducting research trials to evaluate newer organic methods of controlling problems as they become available.

LawnSavers avoids the Wal-Mart Style lawn care that many of the larger companies style themselves after, by using a unique monitoring and spot-treatment IPM method. We don't blanket your whole lawn with a premixed cocktail of several herbicides and pesticides. LawnSavers targets specific pests to cure your lawn's specific problems, and only on those parts of your lawn that need it.

Greener

LawnSavers uses only premium slow-release granular fertilizers that are PHOSPHATE-FREE. Each rainfall or watering dissolves a successive layer of the tiny grains, providing nutrients in a "timed release" fashion. Unlike liquid fertilizers which can over-fertilize or even "burn" a lawn after application, your lawn always gets the nutrition it needs, when it needs it. Granular fertilizer avoids the problem of liquid fertilizers washing below the roots, eventually robbing them of nutrients and contaminating the ground water. LawnSavers specifically targets all of our treatments resulting in reduced pest pressures.

The result is a GREENER lawn!

Effective

Twenty years of experience have allowed LawnSavers to develop a single, flexible program. It starts with our free no-obligation analysis. The result is a "prescription" tailored to your specific needs. You won't be hit for additional items, and additional costs, later. Typically in a season we will make 4-6 service visits, but if your lawn requires more attention, we make additional plant health check-ups and service visits at no extra expense to you according to your program.

Worry-Free

LawnSavers works with you to ensure the health and attractiveness of your lawn. With every visit you will receive a written report of the services completed. Included are instructions and advice on watering, cutting and any other

maintenance to be performed between visits. LawnSavers knowledgeable, licensed and trained plant health specialists are always happy to answer your questions and maintain your peace of mind- talk to our service representatives on a service visit, or simply by phoning our office during business hours. at 905-707-9994 or 1-888-503-LAWN

Service is our specialty. LawnSavers is clearly the best lawn care service in the greater Toronto Area as evidenced by winning the Readers Choice award for Best Lawn Care Service 9 years in a row!
